

JOINTED ARM AWNINGS

SWINGLINE range

PROTECT & SHADE WITH THE FINEST

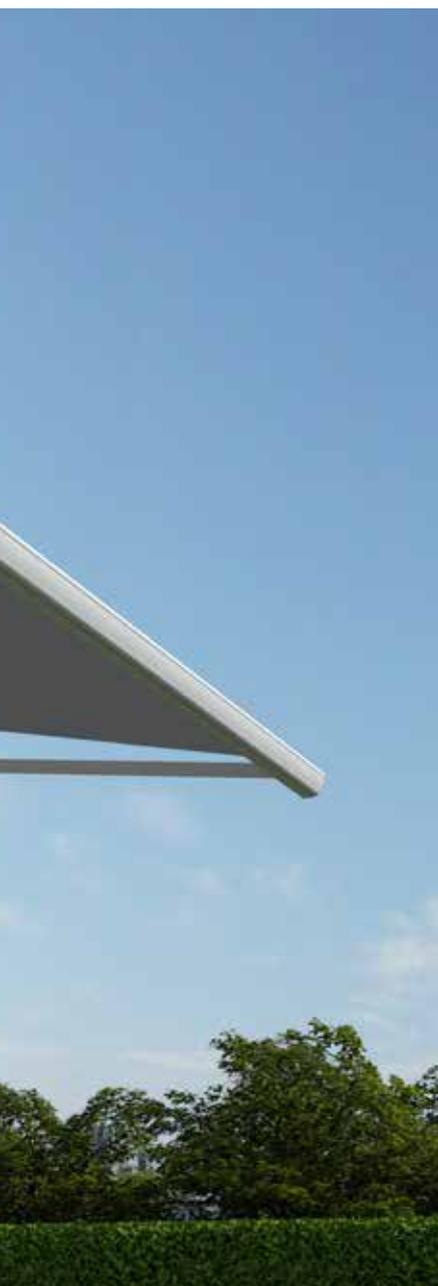

SWINGLINE CASSETTE

With its compact shape, there's always room for the SWINGLINE CASSETTE, even in difficult installations.

SWINGLINE

The SWINGLINE is the value-for-money quality awning. Its sturdy construction, pleasing design and precise manufacture justify its excellent reputation.

ADVANTAGES

FEEL THE COOLING SHADE ON YOUR SKIN

Imagine you had an additional room all of a sudden – outdoors. And somehow you feel as if you were on holiday. Protected from the sun by day, bathed in colourful light, and in the evening sitting cosily out of doors into the night. An awning increases your living space and provides a decorative effect for any home. And so that you keep that holiday feeling for as long as possible, our awnings are built for a long, long life.

3-YEAR GUARANTEE

Like all our awnings, the SWINGLINE range is CE tested. High quality and corrosion resistant materials and coatings guarantee you a durable product which will enable you to enjoy every ray of sunshine.

CASSETTE OR SIMPLY OPEN

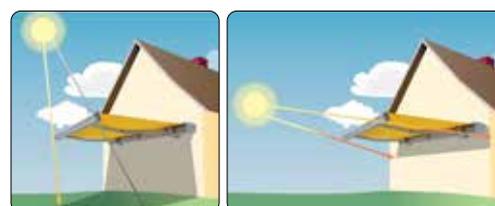

The design featuring a fully enclosed cassette significantly lengthens the life of the awning and makes it possible to use it in exposed locations, as both the awning fabric and the jointed arms retract into the cassette. Open awning systems, on the other hand, are mainly used under existing structural elements in a sheltered location or, if necessary, are protected by a rain protection roof.

AWNING INSTALLATION WITH NO LIMITS

WOUNDWO jointed arm awnings can be fitted on new and renovated buildings wherever they are required – on the wall, ceiling or even on rafters. This makes them exceptionally flexible when designing your home or in renovation projects.

PROTECT & SHADE WITH THE FINEST

In outdoor areas, jointed arm awnings complement internal sun protection, because they effectively screen out solar radiation from above and make the patio a cool and shady place without heat radiation. This significantly reduces the need for cooling. With low sun or on west-facing patios, a larger overhang or a greater angle of inclination provides optimal shading.

High sun
e.g. Southern facade

Low sun
e.g. Western facade

MORE PROJECTION THAN WIDTH

With this variant the arms are attached to the awning crossed and at staggered heights. The crossed arms make it possible for the extension of the awning to be greater than its width, providing adequate shading even in small installation spaces.

OPERATING OPTIONS

Choose between hand crank, wired motor, radio-controlled motor or the Somfy io homecontrol® radio-controlled motor, which allows seamless integration into a home system. Solar-powered motors also allow motorisation without an additional power connection. Increase your comfort with a wind sensor or sun sensor.

HIGHLIGHTS AND ACCESSORIES

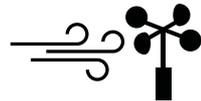

SMART HOME

Products from **woundwo** can be installed flexibly and are compatible with a wide range of smart home systems – whether completely automated or operated via smartphone or remote control.

SOLAR POWER

If there's no connection for power supply, you can still have the luxury of motorised shading. The solar panel with integrated battery is the perfect add-on to this product design.

WIND, LIGHT AND RAIN SENSOR

If limits for wind strength and light intensity are exceeded or fallen below, your product will automatically retract or extend. You can also control the reaction to rain – make your sun protection smart!

STRONG ARMS

Like all **WOUNDWO** awnings, the SWINGLINE range boasts sophisticated technology and premium quality – and at an extremely attractive price/performance ratio. Durability tests, plastic-coated transmission sleeves, stainless steel screws and more guarantee a long life for this high-quality Austrian product. With its compact shape, the SWINGLINE range is suitable for many different installations.

RAIN PROTECTION ROOF

The rain protection roof fits closely against the cloth roller, covers and protects the mechanical elements and thus provides sufficient protection against the wet.

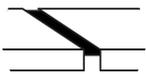

LIGHTVIEW LIGHT STRIP SYSTEM

Do you want more light on the patio? With our Lightview lighting system, no problem. A continuous light strip in naturally anodized aluminium profile brings up to 720 lumens of dimmable light per metre to your terrace at the touch of a button. Better still: once fitted, the lighting strip can be rotated through +/- 45°.

RADIANT HEATING UNIT

On those cooler evenings, crank up the warmth with our stylish, high-performance infrared radiant heating units, which are attached either to the product or to the façade. Control your heating along with your shading system, by remote control!

GAP COVER

The gap between coupled awnings can be covered using the additional functions of the gap cover. The gap cover prevents solar radiation between the individual spans of coupled systems. Valances for a system with a gap cover are manufactured over the total width of the system.

COLOURS DESIGNS AND FABRICS

DESIGNS AND FABRICS

With a trained specialist dealer, take a look at the **WOUNDWO** collection and embark on a voyage of discovery – explore the range of colours, designs in plain colours, multi stripes and block stripes, and fabrics including acrylic and polyester.

UV PROTECTION

Acrylic fabrics are high-quality awning fabrics which are equipped with a range of extras to make them ideal for demanding outdoor applications. The UV protection of the fabrics according to UV Standard 801 ranges from factor 40 to 80.

TEXGARD – EASY-CLEAN

Due to a special textile finishing, these fabrics have particularly useful properties. These include low soiling tendency, high water resistance and a reduced surface tension. Due to the special way of fixing the material, this effect is maintained for an extraordinarily long time. This provides the best possible protection against water penetration, damp and dirt.

ALL-WEATHER

The All-Weather quality is reflected in a fabric manufactured from spun-dyed brand name acrylic and coated on one side. This combines optimal sun protection with protection from drizzle or light rain (inclination at least 14°).

OEKO-TEX STANDARD 100

The Oeko-Tex Standard 100 is a testing and certification system which assures you that the textile products comply with the limit values for certain harmful pollutants.

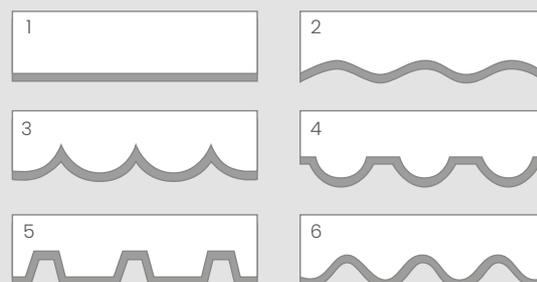

FRAME COLOURS

With over 200 RAL frame colours and more than 350 fabrics, you can find your favourite awning at **WOUNDWO** – however unusual your requirements! There's a perfect awning model for virtually all dimensions and styles.

VALANCE SHAPES

It's not just a question of choosing the awning fabric – you need to decide how the valance should look too. You have the choice of 6 different shapes and a wide range of colours for the edging strips.

SWINGLINE CASSETTE

CASSETTE AWNING

Fabric and arms in closed awning.
Max. width 5,000 mm
Max. projection 3,000 mm

THE light cassette awning is the value-for-money solution for balconies, loggias and smaller patios. Distinguishing features include flexible mounting solutions and a smart design. The fabric awning can easily be retracted.

THE BENEFITS TO YOU

OPEN AWNING

fabric and arms not in closed awning.

Max. width 7,000 mm

(three-part up to 18,000 mm)

Max. projection 3,000 mm

RAIN PROTECTION ROOF

The rain protection roof fits closely against the cloth roller, covers and protects the mechanical elements and thus provides sufficient protection against the wet.

STORMY WEATHER?

Awnings must be protected from excessively strong winds. The radio wind sensor Eolis 3D WireFree offers a simple and discreet solution. The innovative sensor measures the vibration of the awning and automatically gives the command to retract by radio communication in case of a wind alarm. This provides reliable protection for your awning.
